## Call for Expressions of Interest

---

### Bioscientist position

#### Armaka lab

---

We are seeking one bioscientist to join Armaka lab at **BSRC 'Alexander Fleming'** in Athens, Greece ([www.fleming.gr](http://www.fleming.gr)). Our group's main interest focuses on the dissection of stromal cell involvement in inflammatory arthritides. We follow a combination of functional genetic and genomic methodologies, employing assays on animal models and primary cell cultures.

We recently received funding from EULAR to **develop novel 3D organotypic cultures of synovial fibroblasts** that would facilitate the *ex vivo* analyses of their heterogeneity. The prospective candidates for this project must hold at least an MSc degree in Biological Sciences or related fields and have excellent command of the English language. Experience in cell cultures, flow cytometry, molecular biology techniques and/or experience in the animal handling would be highly valued.

Expressions of interest should be sent electronically as a single pdf file to [armaka@fleming.gr](mailto:armaka@fleming.gr). Candidates should provide a cover letter outlining their interests and areas of expertise (maximum 1 page long), together with a detailed CV, as well as contact information of two or more referees.

**Deadline for expression of interest:** 30 November, 2024
